EDUCATION

B.Tech (CSE) <i>Bennett University</i>	CGPA: 8.93	2024 – 2028 Greater Noida
Class XII (CBSE) <i>New Beersheba Public School</i>	87.2%	2023 – 2024 Pithoragarh
Class X (CBSE) <i>New Beersheba Public School</i>	89%	2021 – 2022 Pithoragarh

SKILLS

Languages

C++, Python, HTML, CSS, SQL

Development

FastAPI, Next.js, PostgreSQL, Git/GitHub

Core CS

DSA, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

ML/ Data

NumPy, Pandas, Scikit-learn, TensorFlow, Matplotlib, ANN, CNN

CERTIFICATES

- Operating Systems and You: Becoming a Power User (Coursera/Google)
- Foundations: Data, Data, Everywhere (Coursera/Google)
- Software Engineering (NPTEL)
- Data Structures and Algorithms (Infosys Springboard)

PROJECTS

AI Coding Platform

- Developed a coding platform like LeetCode using Next.js, FastAPI and PostgreSQL, supporting problem browsing and code execution.
- Implemented a Docker based code execution system for running and testing user submitted solutions.
- Developing an AI assistant that provides contextual hints and guidance without directly revealing solutions
- GitHub: <https://github.com/Nishant-Devlal/AI-Coding-Platform> 🔗

Retrieval Augmented Generation (RAG) Chatbot

- Developed an end-to-end Retrieval-Augmented Generation (RAG) chatbot using Sentence Transformers and FAISS for semantic document retrieval.
- Implemented document processing, chunking, embedding generation and similarity-based retrieval, followed by FLAN-T5 response generation.
- GitHub: <https://github.com/Nishant-Devlal/RAG-Chatbot> 🔗
- Live Demo: <https://rag-chatbot-by-nishant-devlal.streamlit.app/> 🔗

Multimedia Recommendation System

- Developed a multi-domain recommendation system for songs, movies and books using content-based filtering for songs and movies and collaborative and popularity-based filtering for books.
- Implemented TF-IDF and cosine similarity for content-based recommendations and evaluated performance using Recall@10, achieving 0.60, 0.80 and 0.50 for songs, movies and books respectively.
- Deployed on Streamlit integrating recommendation workflows and external APIs.
- GitHub: <https://github.com/Nishant-Devlal/Multimedia-Recommendation-System> 🔗
- Live Demo: <https://multimedia-recommendation-system-by-nishant-devlal.streamlit.app/> 🔗

Plant Disease Detection

- Created a web application named PlantGuard AI using Python and Streamlit that uses a deep learning model to identify diseases from images of plant leaves achieving 96.06% training accuracy and 91.07% validation accuracy.
- GitHub: <https://github.com/Nishant-Devlal/Plant-Disease-Detection> 🔗
- Live Demo: <https://plant-disease-detection-by-nishant-devlal.streamlit.app/> 🔗
